Introduction

The Net Stable Funding Ratio (NSFR)

Mismatch in Treatment of unsecured Money Markets

Inconsistent ASF/RSF weightings

| | ASF factor | | |
|--|--------------------------|------------|---------|
| | < 6 | ≥ 6 months | |
| | months to < 1 year ≥ 1 y | | ≥ 1 yea |
| Unsecured funding from non-financial customers (e.g. non-financial corporates/sovereigns/PSEs/MDBs/NDBs/PSEs/regional governments/ promotional banks/credit unions/PICs/deposit brokers) | | | |
| of which is an operational deposit (as defined in the LCR) | 0.50 | 0.50 | 1.00 |
| of which is a non-operational deposit (as defined in the LCR) | 0.50 | 0.50 | 1.00 |
| of which is non-deposit unsecured funding | 0.50 | 0.50 | 1.00 |
| Unsecured funding from other legal entities (this includes the "financial customer definition" for Europe) | | | |
| of which is an operational deposit (as defined in the LCR) | 0.50 | 0.50 | 1.00 |
| of which is a non-operational deposit (as defined in the LCR) | 0.00 | 0.50 | 1.00 |
| of which is non-deposit unsecured funding | 0.00 | 0.50 | 1.00 |

| | | RSF factor | | | |
|--|------------|----------------------------|----------|--|--|
| | < 6 months | ≥ 6 months to < 1 year | ≥ 1 year | | |
| Exposures to central banks | 0.00 | 0.50 | 1.00 | | |
| of which required reserves | CA (Reg | CA (Regulatory) Discretion | | | |
| Loans to financial customers | | | | | |
| of which Unsecured loans to financial customers* | 0.10 | 0.50 | 1.00 | | |

ASF treatment & ASF-RSF mismatch of money market funding

The rules give banks the following weightings for funding from financial institutions (unless operational deposit) and CBs:

- 0% for <6M
- 50% for >6M and <1Y
- · 100% for >1Y

Conclusions:

- (1) Banks would need to move to longer term funding to meet NFSR
- (2) For banks that are both receiver and provider of funding, there is an additional penalty from the RSF on unsecured loans to financial customers:
- 10% (proposed EU rules)
 <u>or</u>15% (Basel rules) for <6M
- 50% for >6M and <1Y
- · 100% for >1Y

and CB exposure is 0% for <6M

Market Impact:

- Participants will ask for less short-term funding from Financials and specific products (e.g. CD/CP)
- Short-dated offers to Financials should disappear as long-term funding would be required to meet NFSR
- → Short-dated MM flows would be negatively affected and most probably further reduced. i.e. increasing illiquidity

NSFR By Currency

NSFR by Currency Calculation

/

Summary

- The proposed NSFR text (Article 428b) introduces a requirement for institutions by referring to "<u>shall</u> calculate and monitor" the NSFR in significant currencies. This would be in addition to BCBS for European banks only
- Article 428d attempts to address this by importing language on the treatment of derivatives for currency reporting in the LCR Delegated Act but has misunderstood the implications this has within the NSFR which is a balance sheet standard (as opposed to cash flow)
- Most (European) banks will manage their longterm currency mismatch via access to the termswap market
- FX & XCCY swaps, however, are derivative instruments and not 'balance sheet liabilities' (e.g. deposits)
- The FX or XCCY swaps used to manage this asset-liability mismatch would not appear in currency reports, i.e. showing a NFSR shortfall in the significant currency the assets are in

Policy Recommendation

- This provision should be removed <u>or</u> significantly amended as the treatment of currency derivatives has not been appropriately specified
- Currency swaps should be reported as a liability for, the currency being swapped into (e.g. received), and as an asset for the currency being swapped out of (e.g. exchanged)
- To effect this treatment, the swaps should receive an appropriate ASF factor
