

Economics at the Intersection of Ethnicity, Gender and Race

Rhonda Vonshay Sharpe

Introduction

The lack of racial, ethnic, and gender diversity in economics is counter to many economic theories. Diversity is the basis for consumer choice, a prerequisite for competition, labor, and factor endowments diversity is fundamental to economic theory, and 'comparative advantage' is a consequence of the diversity in specialization. Yet, the economics profession treats students and faculty as homogenous groups, an oversimplification that has consequences for social and economic policy and diversifying the profession.

Data

Integrated Postsecondary Education System Completion Survey by Race, 1995-2015

Results

- More doctorates are awarded in math and statistics than economics; therefore, math is not why economics is not diverse.
- The growth in undergraduate economics degrees conferred to Black women increased by 1% between 1996-2005 and 2006-2015, which is the equivalent of 47 degrees.
- Spelman College, the only HBCU on the list that does not offer an undergraduate business degree, conferred more bachelor's degrees in economics than any other HBCU (See Table 2).
- 4 of the top 10 institutions have ever had a Black woman on the faculty: Spelman, Florida A&M, N.C. A&T, and Howard; therefore, the lack of Black women faculty does not explain the decrease in degrees awarded to Black women (See Table 2).
- Only 3 schools in common for the top 20 schools for women and Black women (See Table 2 & Table 3).
- Of the economics departments with the largest increase in degrees conferred to Black women, John Jay College is the only one with Black women on the faculty (Table 4).

Recommendations

- The profession needs to have an honest conversation about the definition of diversity. Does diversity mean the inclusion of more people from U.S. historically marginalized racial and ethnic groups or the inclusion of people who are non-white males of European descent?
- Departments should define diversity and use that definition as the core and conscience for the curriculum, and faculty and student composition.
- Provide information about the requirements for the doctorate in economics to ALL students as part of undergraduate advising.
- Expand the diversity conversation to include the representation of minorities and women employed at think tanks, Federal Reserve System, and government agencies.
- Create a penalty system for departments that fail to diversify or broaden participation.
- Create a partnership with AEASP and the Mentoring program to identify young scholars to mentor for upcoming faculty positions.
- Don't diversify your faculty by "poaching" from another department.
- Volunteer to serve as a mentor for CeMent, DITE, or the Mentoring Program.
- Show young scholars how to do what you do. Don't tell them and wait to see if they do it. Be a good mentor. Provide the advice you have provided for you.

www.wiserpolicy.org/w/recommendations

To produce more Black economists, the profession must provide support for programs that have a history of producing Black economists, especially Black women.
